

TWISTER™

**The ultimate fiber for
effective laser vaporisation of the prostate**

The new Twister fiber is developed to offer unmatched ablation rates and excellent reliability.

Due to its special ability to work in contact mode, performance loss and fiber degradation are things of the past. With the new patented bend design the Twister fiber gives you a direct tactile feedback of the area you want to ablate or vaporize.

TWISTER™

In combination with the Evolve Lasers Series the Twister achieves ablation rates of 2-3 grams per minute and can reduce treatment times up to 50% as compared to side firing fibers.

Clinical Tests have proven that a 40-50gr Prostate can be treated in less than 15 minutes with keeping the well known homeostasis characteristics of the EVOLVE Laser Systems.

EVOLVE® Laser System

Main features:

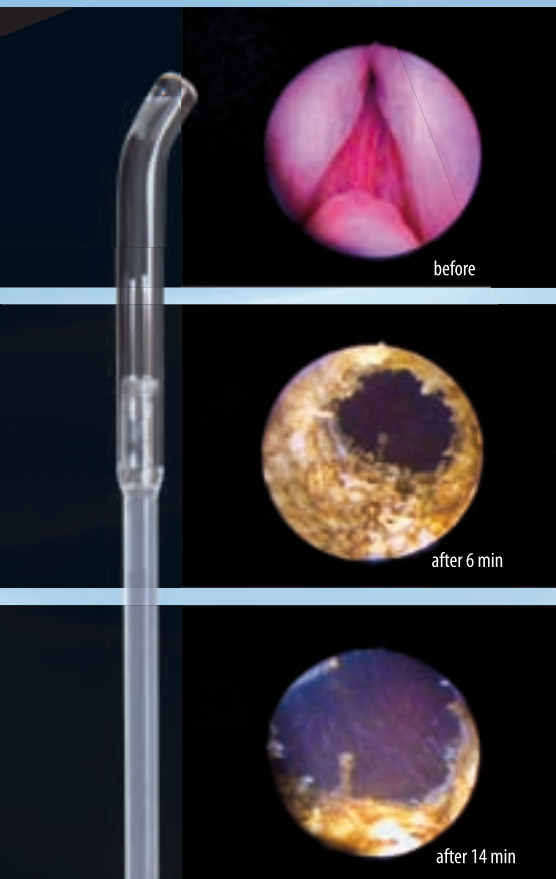

- Working in contact mode
- Long-lasting Fiber without fiber degradation
- Direct and high energy delivery
- Intrasurgical plain surface of the vaporization area
- Compatible to the EVOLVE Laser Series

The Twister benefits

- Higher ablation rates than current existing Side Fiber and Radiofrequency Methods
- Reducing Laser and Procedure time up to 50%
- No Cleaning and other precaution needed to maintain fiber integrity
- No potential side effects towards the end of the procedure due to fiber degradation
- Increased control of the fiber tip
- Enhanced visibility
- Twister allows for excellent treatment of the top of the prostate.
- For the first time the urologist will be able to utilize the traditional TUR type movements effectively with a laser.
